## Fund Management Commentary

The LOYS Global started into the new stock market year with a very dynamic progress. For January, the performance was more than eight percent. In the financial markets, January has brought a turnaround. The worries about rising interest rates have now vanished, as the expectations on economy and inflation are now very subdued. But since many shares have been priced lower by the significant stock market correction in the fourth quarter of last year, the stock market trend turned positive since the beginning of the year. Apparently, the expectations of market participants in the late autumn of 2018 were too negative, or anticipated a too pessimistic economic scenario. The high net investment rate at the beginning of the year has given the LOYS Global a boost. Until further notice, this is maintained.

**Important Information:**

<sup>1</sup>The gross value development (BVI method) takes into account all costs incurred at fund level (for example, the management fee) with the exception of any front-end load that may be incurred (this is otherwise marked separately). Additional costs may be incurred individually at customer level (e.g. custody account fees, commissions and other fees). Model calculation (net): One investor would like to purchase units for EUR 1000. With a maximum initial sales charge of 5%, he or she must spend a one-off of EUR 50. Additionally, custody account costs may be incurred which affect the performance of the portfolio reduce the deposit costs. The custody account costs result from the price and service list of your Bank.
